US-09-071-845-359/C

Sequence 359, Application US/09071845

Patent No. 6132967

GENERAL INFORMATION:
APPLICANT: Susan Grimm
APPLICANT: James McSwiggen
APPLICANT: James McSwiggen
APPLICANT: Geneth G. Draper
TITLE OF INVENTION: RIBOZYME TREATMENT OF
TITLE OF INVENTION: DISEASES OR CONDITIONS
TITLE OF INVENTION: NURRACELLULAR ADHESION
TITLE OF INVENTION: MOLECULE-1 (I-CAM-1)
NUMBER OF SEQUENCES: 2390
CORRESPONDENCE ADDRESS:
ADDRESSE: Lyon & Lyon
STREET: Suite 4700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FILING DATE:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 516
US-08-584-040-6062
Sequence 6062, Application US/08584040
Patent No. 6346398
GENERAL INFORMATION:
APPLICANT: Pavco, Pamela
APPLICANT: Bavco, Pamela
APPLICANT: Stinchcomb, James
APPLICANT: Stinchcomb, Jame
TITLE OF INVENTION: METHOD AND REAGEN
TITLE OF INVENTION: METHOD AND REAGEN
TITLE OF INVENTION: CONDITIONS RELATE
TITLE OF INVENTION: CONDITIONS RELATE
TITLE OF INVENTION: GROWTH FACTOR
Sequence 2547, Application US/08584040
Patent No. 6346398
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        218/064
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TELERYK: (213) 955-1600
TELERYK: 67-3510
INFORMATION FOR SEQ ID NO: 2547:
SEQUENCE CHARACTERISTICS:
LENGTH: 17 base pairs
TYRE: nucleic acid
STRANDEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NAME: Warburg, Richard J.

; Sequence 2149, Application US/08435628
; Patent No. 581770.
; GENERAL INFORMATION:
; APPLICANT: Stinchcomb, Dan T.
APPLICANT: Draper, Kenneth
; APPLICANT: Drayer, Thale
; APPLICANT: Jarvis, Thale
; TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR
; TITLE OF INVENTION: TREATMENT OF RESTENOSIS AND
; TITLE OF INVENTION: CANCER USING RIBOZYMES
; NUMBER OF SEQUENCES: 2627
CORRESPONDENCE ADDRESS:

Patent No. 6544284

GENERAL INFORMATION:

APPLICANT: Saxena, Inder M.
APPLICANT: Brown, R. M.

TILE OF INVENTION: Recombinant Cellulose Synthase
NUMBER OF SEQUENCES: 15

CORRESPONDENCE ADDRESS:

ADDRESSEE: ALOLd, White. & Durkee

STREET: P.O. Box 4433

CITY: Houston
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  COMPUTER READABLE FORM:

Sequence 1346 Application US/09371772B
Patent No. 6566127
GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Robozyme Pharmaceuticals, Inc.
APPLICANT: Stinchomb, Dam
APPLICANT: Scholoob, Jaime
APPLICANT: Escobedo, Jaime
TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions;
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
FILE REFERENCE: MBHB00,876-J (237/198)
CURRENT APPLICANION NUMBER: US/09/371,772B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   APPLICANT: McSwiggen, Jim

Sequence 16, Application US/09212771

Sequence 16, Papel Cation US/09212771

Setent No. 5958773

GENERAL INFORMATION:

APPLICANT: Brett P. Monia

TILLE OF INVENTION: ANTISENSE MODULATION OF AKT-1 EXPRESSION

FILE REFERENCE: RIS-0034

CURRENT FILING DATE: 1998-12-16

CURRENT FILING DATE: 1998-12-16

MUMBER OF SEQ ID NOS: 47

LENGTH: 18

Sequence 66, Application US/08485942A

Sequence 66, Application US/08485942A

Sequence 66, Application US/08485942A

Fatent No. 60488377

GENERAL INFORMATION:

APPLICANT: MARGHERITA MAFFEI, USFFREY HALAAS, KETAN GAJIWALA, AND STEPHEN K. BURLE

TITLE OF INVENTION: OB POLYPEPTIDE AS MODULATORS OF BODY WEIGHT (AS

TITLE OF INVENTION: AMENDED)

NUMBER OF SEQUENCES: 99

CORRESPONDENCE ADDRESS:

ADDRESSEE: Alauber & Jackson

STREET: 411 Hackensack

CITY: Hackensack

STREET: Wew Jersey

COUNTRY: USA

ZIP: 07611
                                                                                                                                                                         Sequence 47, Application US/08864473

Sequence 47, Application US/08864473

Patent No. 6027889

GENERAL INFORMATION:

APPLICANT: Barany, Francis

APPLICANT: Lubin, Matthew

TITLE OF INVENTION: DETECTION OF NUCLEIC ACID SEQUENCE DIFFERENCES USING

TITLE OF INVENTION: COUPLED LIGASE DETECTION AND POLYMERASE CHAIN REACTIONS

TITLE REPREBENCE: 19603/41

CURRENT APPLICATION NUMBER: US/08/864,473

CURRENT FILING DATE: 1997-05-28

BARLIER FILING DATE: 1996-05-29

NUMBER OF SEQ ID NOS: 76

SEQ ID NO 47

LENGTHR: BAENTING NO 47
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0

                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 47, Application US/09440523

Sequence 47, Application US/09440523

Patent No. 6268148

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Barany, Francis

APPLICANT: Lubin, Matthew

IITLE OF INVENTION: DETECTION OF NUCLEIC ACID SEQUENCE DIFFERENCES USING

TITLE OF INVENTION: COUPLED LIGASE DETECTION AND POLYMERASE CHAIN REACTIONS

FILE REFERENCE: 19603/441

CURRENT APPLICATION NUMBER: US/09/440,523

CURRENT FILING DATE: 1999-11-15

PRIOR PILING DATE: 1997-05-28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .
